- Assignment 1 3.2
- Class Activity - 2 3.3

WEEK 04 • IS321 ENTERPRISE ARCHITECTURE

# EA as a Management Program

*The Living Roadmap That Turns Architecture Into Action*

ROADMAP

→ addresses new EA is managed & governed overtime so its not obsolete

# What We'll Cover

| | | |
|---|---|---|
| 01 | EA as a Management Program | Why EA is an ongoing discipline, not a one-time documentation project |
| 02 | The Role of the EA Management Plan | The living document that ties the whole program together |
| 03 | Part 1: EA Program Management | Governance, roles, budget, and how the program runs day to day |
| 04 | Part 2: Current Architecture Summary | The baseline — what exists across the enterprise today |
| 05 | Part 3: Future Architecture Summary | The target state and the sequencing plan to get there |
| 06 | Part 4: Glossary & References | Shared vocabulary and the standards the program draws on |
| 07 | Worked Example | A university's EA Management Plan, part by part |

# EA Is a Program, Not a Project

> *A project ends when its deliverable is complete. EA never finishes — the enterprise keeps changing, so the architecture that describes it has to be actively managed, updated, and governed on an ongoing basis.*

emphasizes a fundamental rule:
EA is continuous process rather than a one-time project that is upgraded and adapted to changed requirements pertaining to 5 levels

— The core distinction behind EA as a management program (Bernard, 2012)

## What this means in practice

### Continuous, Not One-Time

The architecture is revisited and updated as goals, products, data, systems, and infrastructure change.

### Owned by a Program, Not a Task Force

A dedicated EA program — with a sponsor, staff, and budget — sustains the work long-term.

### Guided by a Living Plan

The EA Management Plan is the document that keeps the program organized and moving forward.

THE BIG PICTURE

# The EA Management Plan's Four Parts

*A living document — the roadmap that ties every other element of the EA program together. It has four parts, each answering a different question.*

PART 1 OF 4

# EA Program Management

How the program is run

Describes the governance and administration of the EA program itself: who sponsors it, who staffs it, how it's funded, and how its progress is tracked and reported over time.

EXAMPLE

*A university names a Chief Architect who reports to the CIO, secures annual budget for an EA repository tool, and sets a quarterly cadence for reporting program status to university leadership.*

sponsor of the program

directly communicates

to set budgeting plans, schedules and milestones

## What lives in this part

- EA program roles and sponsorship
- Governance and oversight structure
- Budget and staffing plan
- Reporting schedule and milestones

PART 2 OF 4

# EA Current Architecture Summary

for future projects

+ overseeing the performance of enterprise relative to strategy

## What exists today

A summarized “as-is” snapshot of the enterprise's goals, products, data, systems, and infrastructure as they exist right now — the baseline everything else is measured against.

EXAMPLE

*The summary shows the university currently runs three separate, disconnected student-record systems across its campuses — a fact that becomes important once the future summary proposes consolidating them.*

## What lives in this part

- Baseline inventory across all five levels
- Known gaps and pain points
- Reference to detailed artifacts in the repository
- Consistent format for comparison with the future view

PART 3 OF 4

# EA Future Architecture Summary

Where the enterprise is headed

Summarizes the target “to-be” state across the same five levels, plus the sequencing plan for closing the gap between current and future — the roadmap piece of the roadmap.

EXAMPLE

*The future summary proposes consolidating the three student-record systems into one cloud-based platform within 18 months, sequenced campus by campus to limit disruption.*

## What lives in this part

- Target state across all five levels
- Sequencing plan and timeline
- Tactical (1–2 yr) and strategic (3–10 yr) horizons
- Link back to the strategic goals driving the change

PART 4 OF 4

# EA Glossary & References

## A shared vocabulary

Defines the terms, acronyms, and standards used throughout the EA Management Plan and repository — so an executive, a business owner, and an engineer all mean the same thing when they say "segment" or "artifact."

**EXAMPLE**

*The glossary defines "Line of Business," references the university's data-privacy standard (PDPL alignment), and cites TOGAF 9.2 as the standard informing the program's methodology.*

## What lives in this part

- Definitions of EA-specific terms and acronyms
- External standards the program follows
- Internal policy references
- Version history of the plan itself

SYNTHESIS

# The Four Parts, Working Together

| | |
|---|---|
| **Part 1: Program Mgmt.** | Provides the governance and resources that make the other three parts possible. |
| **Part 2: Current Summary** | Establishes the baseline every future decision is measured against. |
| **Part 3: Future Summary** | Defines the target and the sequence for closing the gap from Part 2. |
| **Part 4: Glossary & Refs.** | Keeps Parts 1–3 consistent and understandable to every stakeholder. |

establishes shared understanding between stakeholders to promote cross coordination

WORKED EXAMPLE

# A University's EA Management Plan

*A one-page snapshot of how all four parts might look for a mid-sized university rolling out its online-degree initiative (the same initiative introduced in Week 3).*

| | |
|---|---|
| **Program Mgmt.** | Chief Architect reports to CIO; $250K annual budget; quarterly board updates. |
| **Current Summary** | 3 disconnected student-record systems; no unified advising data view. |
| **Future Summary** | 1 cloud-based platform by Q3 2027; phased campus-by-campus rollout. |
| **Glossary & Refs.** | Defines “advising portal”; cites PDPL and the university's data-privacy policy. |

CHAPTER SUMMARY

# Key Takeaways

- EA is a management program, not a one-time project — it requires ongoing governance, staffing, and budget.
- The EA Management Plan is a living document that ties the whole program together.
- It has four parts: EA Program Management, Current Architecture Summary, Future Architecture Summary, and Glossary & References.
- Program Management provides the governance that makes the other three parts possible; the Current and Future summaries define the gap to close; the Glossary keeps everyone speaking the same language.
- Next week, we go deeper into where all of this documentation actually lives: the EA Repository.

COMING UP NEXT

# Further Reading & Next Session

## Reading Material

- Bernard, S. (2012). An Introduction to Enterprise Architecture (3rd ed.) — Primary text
- The Open Group — TOGAF Standard, Version 9.2

## Next: Week 5

The EA Repository — the six columns that organize EA documentation. Mapped to CLO1, CLO3.

**Questions?**
